

The chart displays the performance drop for three models when moving from an Official (speaker-disjoint) test to a Phrase-Disjoint (template-disjoint) test. The y-axis represents performance percentage, and the x-axis shows the two test conditions.

Model	Official (speaker-disjoint)	Phrase-Disjoint (template-disjoint)	Drop (pp)
Lexical	77.92%	77.40%	-0.52
Qwen3.5-2B	50.98%	50.00%	-0.98
Qwen3.5-72B	54.65%	43.60%	-11.05

Drop: -11.05 pp (template leakage gap)

n phrase-disjoint test = 2,296 (38 clusters) · n official test = 1,934

Proportion of predictions (%)

Complete collapse: 100% abstentions
 $R_{call}^{exact} = 0\%$

50% (Balanced Ground Truth)

Model	Call action (%)	Abstain policy (%)	Ground Truth (50/50 balanced) (%)
Lexical	27.4%	72.6%	50.0%
Qwen3.5 0.8B	73.1%	26.9%	50.0%
Qwen3.5 2B	0.0%	100.0%	50.0%

Legend: Call action (green), Abstain policy (orange), Ground Truth (50/50 balanced) (gray)
